E-Waste Rules: Following vs. Violating

Assessment of five electronics manufacturers shown in the supplied image

Regulatory basis: CPCB's FAQ under the E-Waste (Management) Rules, 2022 states that covered manufacturers/producers are subject to the rules; manufacturers, producers, recyclers and refurbishers must register on the E-Waste EPR Portal, and producers must fulfil applicable EPR recycling obligations through registered recyclers. The rules also require environmentally sound management and set RoHS limits for specified hazardous substances. ■filecite■turn0file0■L43-L66■ ■filecite■turn0file0■L149-L167■

Important: A company is called a **violator** only where reliable evidence establishes a violation. A missing public certificate or unavailable EPR data is classified as an **evidence gap**, not as a violation.

Company	Status	What the evidence shows
Sahasra Electronics	FOLLOWING	EPR authorization is publicly displayed; e-waste management and collection through a
Kaynes Technology	FOLLOWING	Annual reporting describes source segregation, 3R waste management and use of auth
Dixon Technologies	FOLLOWING	FY2024-25 reporting says e-waste is managed through government-authorized recycle
Foxconn	FOLLOWING (environmental level)	Third-party audits covering India found no priority environmental findings; current India-
Tata Electronics	NO VERIFIED VIOLATION / GAP	Government record shows used-equipment import was conditioned on end-of-life dispo

Final classification

Following: Sahasra Electronics, Kaynes Technology, Dixon Technologies and Foxconn (for the environmental-management evidence reviewed).

No verified violator: None of the five companies could be reliably classified as a current violator from the evidence reviewed.

Evidence gap requiring further verification: Tata Electronics, plus India-specific EPR-registration/target records for Foxconn and some EPR-specific details for Dixon/Kaynes.

1. Sahasra Electronics

Status: FOLLOWING

How the company compares with the rules

• The CPCB rules require producer registration and environmentally sound e-waste management. ■filecite■turn0file0■L217-L247■

• Sahasra's website displays an EPR Authorisation Certificate and an authorization certificate for E-Waste Management.

• Its e-waste programme says it works with E-Waste Recyclers India and describes PAN-India collection and recycling/dismantling.

• Its sustainability report says the factory is approved by the local pollution control board for e-waste/hazardous waste and that the company is registered under EPR.

• No reliable current violation was found.

https://www.sahasraelectronics.com/sepl_csr_policy.pdf

2. Kaynes Technology

Status: FOLLOWING

How the company compares with the rules

• The rules require environmentally sound management and appropriate registered/authorized recycling arrangements. ■filecite■turn0file0■L85-L94■

• Kaynes' FY2024-25 annual report describes segregation at source, Reduce-Reuse-Recycle practices and routing hazardous/non-recyclable waste through authorised government-approved vendors.

• The report states that environmental initiatives are governed by an EHS policy and operations are aligned with ISO 14001-certified environmental management systems.

• The public report does not provide enough detail to independently prove every current EPR-portal target transaction, so that is an evidence limitation rather than a violation.

• No reliable current violation was found.

3. Dixon Technologies

Status: FOLLOWING

How the company compares with the rules

• The rules require environmentally sound e-waste management and EPR compliance where the company is a covered producer. ■filecite■turn0file0■L210-L240■

• Dixon's FY2024-25 annual report says e-waste is managed with government-authorized recyclers accredited by CPCB/SPCB.

• The report records 21.6 MT of e-waste generated in FY2024-25 and states that e-waste, plastic and hazardous waste are managed through government-authorized recyclers.

• Dixon also states that it limits hazardous substances including lead, mercury, cadmium and hexavalent chromium.

• The exact current E-Waste Rules 2022 EPR registration/target certificate was not independently verified from the public material reviewed; this is a documentation gap, not proof of violation.

4. Foxconn

Status: FOLLOWING — ENVIRONMENTAL LEVEL

How the company compares with the rules

• The CPCB rules require environmentally sound management of e-waste. ■filecite■turn0file0■L47-L60■

• Foxconn's third-party audit programme covers environmental management at manufacturing sites, including India.

• Its 2024 audit covering Andhra Pradesh and Tamil Nadu reported no major hidden environmental risks; identified deficiencies were being tracked and corrected.

• Its 2025 third-party audit programme reported no priority findings overall and an environmental compliance rate above 97% across the audited scope.

• The public evidence reviewed does not independently establish Foxconn India's current E-Waste Rules 2022 EPR registration or numerical EPR target achievement. Therefore it is not called a violator.

https://www.foxconn.com/en-us/CSR/third-party-audit-summary-report

5. Tata Electronics

Status: NO VERIFIED VIOLATION — EVIDENCE GAP

How the company compares with the rules

• The CPCB framework requires environmentally sound management and applies to covered manufacturers/producers. ■filecite■turn0file0■L61-L73■

• A MoEFCC Expert Committee record concerning Tata Electronics Systems Solutions recommended import of 19,872 used Mac Mini units subject to submission of a Chartered Engineer Certificate and end-of-life disposal under the prevailing E-Waste Management Rules.

• The record shows the company was required to address e-waste/end-of-life obligations for the proposed used-equipment import.

• However, the public record reviewed does not independently verify current EPR portal registration, recycling targets or returns for Tata Electronics.

• This is an evidence gap; it is not sufficient to call Tata Electronics a violator.

Who is violating, and in what ways?

Verified violators among these five: NONE IDENTIFIED.

The evidence reviewed does not establish that Foxconn, Dixon Technologies, Kaynes Technology, Sahasra Electronics or Tata Electronics is currently violating the E-Waste (Management) Rules, 2022. The main issues are **verification gaps**, especially whether current EPR portal registration, EPR certificates, recycling targets and returns can be independently confirmed from public records.

If your assignment specifically requires a 'violating company', it would be academically safer to write **'No verified violation found'** rather than inventing a violation. A genuine violation would require evidence such as a CPCB/SPCB enforcement order, non-compliance notice, failed audit finding specifically tied to the E-Waste Rules, or proof of unregistered/non-authorized disposal.

The CPCB FAQ also states that environmental compensation may be imposed for violations of the rules.
